

# THE FLICK GAME

**OPERATION D** Add and subtract fractions with friendly but unlike denominators (e.g., 2 or 10) using models and symbols

SAMPLE 1

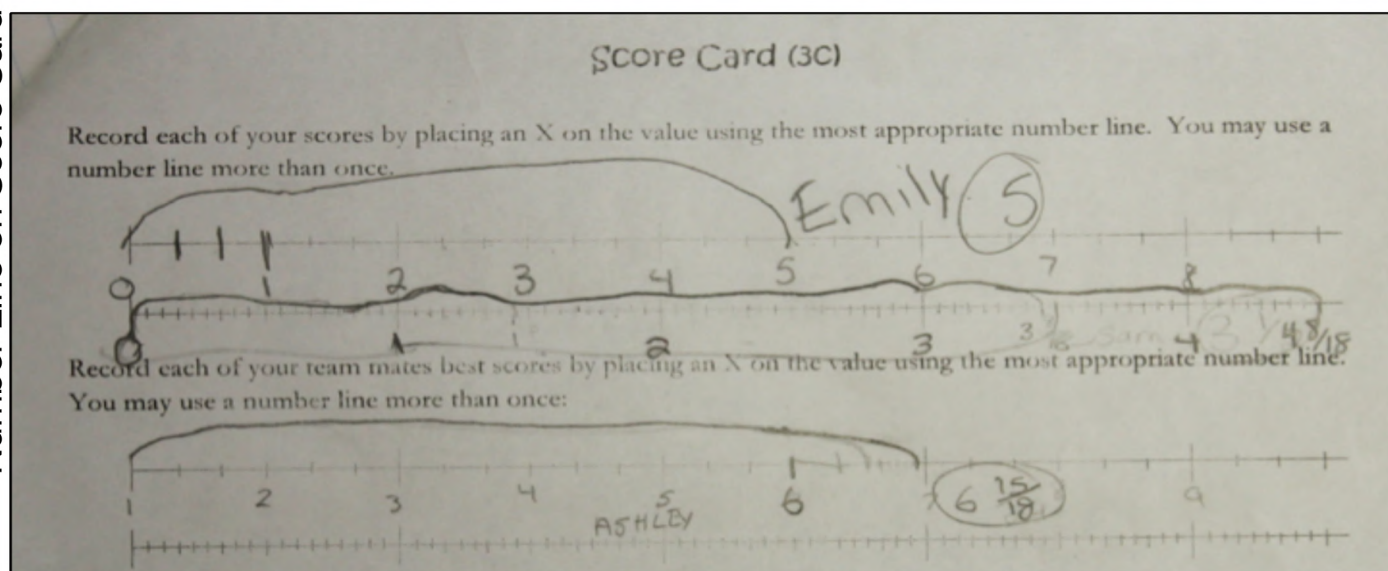

Area Model

This student reflected their total score successfully using an area model constructed on graph paper. It isn't apparent that the area model was used to track each score and calculate the total sum.

SAMPLE 2

Number Line on Score Card

Notice the students have used the number line to place their individual scores, accurately labeling the number line to assist them in the placement of their scores. The students did not use the number line as a tool for adding their total score.
